*** Notes of Significance ***

Fires highlighted in yellow have submitted a FINAL ICS-209 or will no longer meet criteria to be prioritized

[illegible]

Evening Brief

Date: Sunday October 4th, 2020

Weather Summary

Well above normal temperatures and dry weather will continue through much of this week, as an unusually strong high-pressure ridge along the West Coast continues to dominate the entire western US.

Afternoon temperatures will be 8-12 degrees above normal, along with afternoon humidity levels ranging from 6-12% across the southern half of the Great Basin, and 13-20% across most northern areas, along with moderate to poor humidity recovery across most mid-upper slopes. A weak front will enhance northwest winds a bit in parts of Idaho, northern Utah, and Western Wyoming on Monday as it pushes slowly southward. Gusts of 20-30 mph are expected in these areas.

Haze/smoke will continue to impact western and northern areas of the Great Basin occasionally from fires in California.

Later this week, southwest winds will begin to increase across the western portion of the Great Basin, as a deepening storm system is expected to approach the West Coast. By next weekend, there is the potential for widespread precipitation across most of the northern and central areas of the Great Basin.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 4	New Fires and Acres: 14 fires for 20 acres. 755 acres Large Fire Growth

Fuels/Fire Potential

The continuation of above normal temperatures and very dry conditions will bring about more gradual drying of fuels across all areas of the Great Basin, including Idaho and Wyoming. Fuels in the southern half of the Great Basin are still near record level dryness. Fuels in northern areas will likely approach critical levels again by early this coming week.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

By this coming weekend, a large, long duration precipitation event across northern and central areas should bring significant and long-lasting moistening of fuels to those areas.

Resources:

Aviation within the Great Basin

- 1 VLAT, 3 LATs, 0 CL-415
- 16 SEATs, 0 FB, 8 AA, 0 ASM, 0 LP
- 8 Type 1 Helicopters / 6 Comm.
- 8 Type 2 Helicopters / 5 Comm.
- 18 Type 3 Helicopters / 12 Comm.

Crews Committed within the Great Basin

- 4 IHCs / 0 Available
- 13 Type 2IA / 0 Available
